Research and potential research on valuable broadleaved tree species in Denmark

J.P. Skovsgaard - *Forest and Landscape Denmark* - 2004

Research on valuable broadleaves / noble hardwoods is often carried out as an aside to other research, for example in the context of

- Tree species trials
- Genetic research
- Selection forest exp.
- Coppice with standards exp.
- Underplanting of oak experiments
- Thinning experiments in sycamore and Norway maple
- Some other thinning experiments
- Afforestation experiments
- Exotic valuable brl. (in forestry practice)
- ValBro in urban forests
- ValBro for aesthetics, recreation, biodiversity, etc.

Underplanting of oak with hornbeam (exp. QØ)

Exotic valuable broadleaves

An example: Experiment QØ, plot no. 9

Underplanting of oak with different *Acer* species, including Norway maple, *A. hyrcanum*, *A. monspessulanum*, *A. circinnatum* and possibly *A. saccharum*

JPS - 4 Nov. 2004
